

ShipPalm Integration - API Connect Voice Over Script

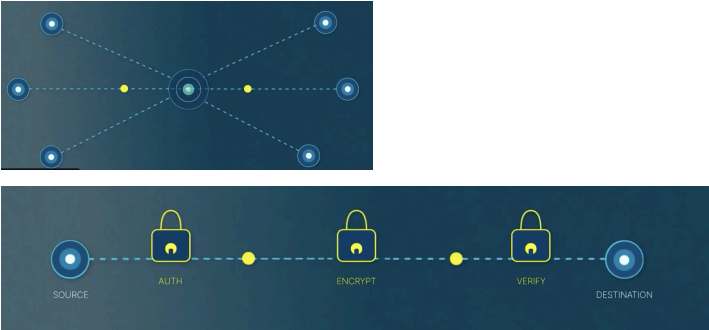

Approx Duration - (2-3 minutes)

Scene No	Shot Name	Voice Over	Developer Notes
1	Industry Problem	Maritime companies today do not struggle because they lack software.	• Start with a ship sailing in the ocean to establish the maritime environment. • Slowly move into a maritime office or ship operations environment. • Show one person standing in the center looking confused or stressed. • Around the person, show different application windows popping up: ○ VMS ○ Finance ○ Operations ○ Procurement ○ Vessel Management ○ Crew Management Keep all apps separated initially.

1	Industry Problem	They struggle because their systems cannot communicate.	When the VO says: “They struggle because their systems cannot communicate.” show connection lines trying to connect the apps. Then show red “X” marks or broken connection symbols to indicate disconnected systems.
1	Industry Problem	• Operations. • Finance. • Procurement. • Crew. Every department works. But not always together.	• After that, transition into split-screen views showing each department working separately in their own systems. • Use realistic business software screens instead of futuristic graphics. • Keep animations smooth, slow, and premium. • Avoid fast transitions or too much movement.

2	Hidden Challenge	The result is fragmented information. Manual effort. Delayed decisions. Hidden inefficiencies. The problem is not digitization. The problem is integration.	 • Show different animated icons one by one for each problem. • When VO says: “The problem is not digitization.” show the on-screen text: DIGITIZATION • Then apply a strike-through animation on the word. • Immediately replace or transition the text to: INTEGRATION • Highlight “INTEGRATION” with glow or clean reveal animation to emphasize the core message.
3	Big Idea	For years, transformation	• Keep the below systems displayed separately on the left side of the screen. • SAP

		meant replacing systems. But replacement is costly. Risky. Disruptive.	• Compass • Other systems Do not connect the systems initially. On the right side, show a vertical list with icons and text: • Risky • Disruptive • Costly
3	Big Idea	The future is not a replacement. It is a collaboration.	 • Take the same disconnected systems from the previous scene: ○ SAP ○ Compass ○ Other systems

			• Animate these systems moving smoothly from the left side of the screen toward the right side.
4	ShipPalm Vision	ShipPalm believes maritime systems should coexist. Collaborating through open architecture. Sharing information securely. Working together.	 Show ShipPalm in the center connected with: • VMS • Finance • Operations • Procurement • Crew Management • ERP Use dotted animated connection lines like the reference image. Add moving data dots on the lines to show data flow.

			When VO says: “Collaborating through open architecture” animate all systems connecting smoothly. Then show secure data flow: • Source → Auth → Encrypt → Verify → Destination Use lock icons for security steps.
5	API Portal Reveal	This vision comes to life through the ShipPalm API Portal. A centralized integration framework designed to connect ShipPalm with enterprise systems. Securely.	• Show API Portal homepage • Dashboard reveal • Below the portal screen list the icons for the following. ○ Securely. ○ Reliably. ○ At scale.

		Reliably. At scale.	
6	Business Workflow Example	Imagine a purchase request created onboard a vessel. Through API integration, the request flows directly into ERP. Financial approval happens automatically.	• Start with a cinematic shot of a captain onboard the vessel creating a purchase request in ShipPalm. • Show the request flowing digitally from the ship to the ERP system. • Then show the ERP connected to the Financial system. • Show approval status changing to Approved in the Financial system.
6	Business Workflow Example	Status returns to ShipPalm. One collaborated workflow. Multiple systems.	In the next screen, show workflow: • Ship → ShipPalm App → API Connect → ERP Add two-way animated connection lines between ShipPalm, API Connect, and ERP to show information moving both directions.

		Zero manual transfer.	Finally connect all systems together in one connected network view. Show the text: • One collaborated workflow. • Multiple systems. • Zero manual transfer.
7	Portal Capability Showcase	The API Portal allows teams to explore available integrations. Browse modules. Understand data structures. Validate integration requirements. And test connectivity through secure authentication.	• In the API portal screen, Show Various Get post methods using mouse click on different modules. • Then show the Authorization process screen. Animate the lock icon changing: • Open lock → Closed lock

8	Trust & Proof Layer	Trust comes from implementation. ShipPalm already integrates with Oracle, SAP, and Microsoft. The world's leading ERP platforms. Alongside multiple maritime systems. Demonstrating enterprise-ready integration maturity.	• Use premium logo animation to connect the ecosystem connections elegantly. Avoid overcrowding the screen with too many logos at once. This scene should feel highly credible and enterprise-focused. • Use the OST: Demonstrating enterprise-ready integration maturity.
9	Closing Vision	The future of maritime is not one platform replacing another. It is systems working together.	• Show ShipPalm API in the center of the screen. • Around it, show connecting cards with: • Procurement • PMS • HSEQ • Crew • Voyage • Certificate

		Open architecture. Collaborated intelligence. Enterprise-ready ecosystems. This is the future ShipPalm believes in.	Animate all cards connecting smoothly to ShipPalm API using glowing connection lines. Then slowly transition the cards into real platform names: • F++ • MSBC • ProcureShip • Compas • DNV • SAP Keep ShipPalm API highlighted as the central connection layer. Add moving data flow animation between all connected platforms. End with all systems fully connected in one ecosystem view.
10	Final CTA	ShipPalm API Portal. Collaborating maritime operations with the enterprise world.	• Show the digital ship sailing with below OST OST ShipPalm API Collaborating maritime operations with the enterprise world. sales@zeronorth.com
