

Emergency Preparedness Training

Voice Over Script Document

Course Title

Emergency Preparedness

Organization

Tata Hitachi

Target Audience

Employees, contractors, supervisors, and all personnel working within the plant or industrial facility.

Course Duration

Approximately 20–25 Minutes

Course Mode

E-Learning / Instructor-Led Training

Course Introduction

Welcome Note

In an industrial emergency, the difference between a minor incident and a major disaster is exactly 60 seconds.

One minute to think, one minute to act.

Today, we aren't just learning a policy; we are mastering the seconds that save lives.

Hi! I'm Shield, your guide to Emergency Preparedness.

I'm here to help you understand exactly what to do when things don't go according to plan.

In an emergency, every second counts.

This course will show you how to spot a crisis, who to call, and how we work together to keep everyone safe.

Let's get started!

Course Outline

1. Introduction to Emergency Preparedness
 2. Importance of Being Prepared
 3. Identifying and Reporting an Emergency
 4. Emergency Communication Process
 5. Emergency Response Team (ERT) Roles
 6. Emergency Support and Coordination
 7. External Communication
 8. Emergency Communication Flow
 9. Summary & Conclusion
-

Module 1: Introduction to Emergency Preparedness

1.1 Learning Objectives

Voice Over Script

By the end of this module, you will be able to:

- Identify and report different types of emergencies
 - Understand your specific role as a First Observer
 - Navigate the Tata Hitachi communication flow
 - Identify the key members of the Emergency Response Team
-

Module 2: Importance of Being Prepared

2.1 Why Emergency Preparedness Matters

Voice Over Script

Why does this matter?

Because in a high-pressure situation, when the pressure is on, we don't just “hope for the best”—we rely on exactly what we've practiced.

Being prepared reduces panic, prevents minor incidents from turning into disasters, and, most importantly, saves lives.

At Tata Hitachi, safety is a shared responsibility.

Your quick action is the first link in our safety chain.

Module 3: Identifying and Reporting an Emergency

3.1 Incident Occurrence

Voice Over Script

An emergency could be anything from a small fire or a chemical spill to a medical injury or a natural disaster.

The moment you see something wrong, the “Emergency Clock” starts ticking.

3.2 Role of the First Observer

Voice Over Script

If you are the person who discovers the incident, you are the First Observer.

Your job isn't to be a hero—it's to be a communicator.

Follow the Assess–Alert–Act rule:

Assess

Is there an immediate danger to you?

If the area is unsafe, do not enter.

Alert

This is the most important step.

You must trigger the communication chain immediately to get help moving toward you.

Act

If—and only if—it is safe to do so, use a nearby fire extinguisher or provide basic first aid while waiting for the experts.

Module 4: Emergency Communication Process

4.1 Informing the Line Manager / Supervisor

Visual Suggestion

An animation of a worker quickly speaking to a supervisor on the shop floor or via a handheld radio.

Voice Over Script

Identifying an emergency is only the beginning.

To get the right help to the right place, you must follow the Tata Hitachi Emergency Communication Process.

This process is divided into two immediate, high-priority actions.

Your first point of contact is your Line Manager, Supervisor, or Contractor Supervisor.

Why?

Your supervisor knows the immediate area better than anyone else and can help manage local evacuations or equipment shutdowns while you call for backup.

The Action

Report the incident clearly.

Tell them exactly what happened—whether it's a fire, a leak, or an injury—and where it occurred.

The Result

This ensures that leadership at the site level is aware and can begin taking local safety measures immediately.

4.2 Contacting the Emergency Control Room (ECR)

Visual Suggestion

A close-up of a desk phone dialing 377. The numbers 377 / 444 and 9046141555 pulse on the screen.

Voice Over Script

While your supervisor manages the local area, you—or a designated coworker—must contact the Emergency Control Room, or ECR.

The ECR is the “brain” of our emergency response.

They are responsible for maintaining the entire chain of communication.

How to Reach Them

Use the internal extensions:

- 377
- 444

If you are using a mobile phone, call the dedicated landline:

- 9046141555

What to Say

Be precise.

State:

- Your name
- The nature of the emergency

- The specific location
Example: “Fabrication Bay 3”

The Protocol

Do not hang up until the ECR operator confirms they have all the details.

Shield Tip

“Think of these two steps as a ‘Double Alert.’ One secures your immediate area through your supervisor, and the other brings the full power of Tata Hitachi’s response team to your side.”

Module 5: Emergency Response Team (ERT) Roles

5.1 Key Emergency Response Roles

Voice Over Script

Once a call is made, our specialized team swings into action.

Each member has a specific job.

Incident Controller

They are the “boots on the ground,” managing the situation directly at the scene.

Incident Coordinator

They act as the bridge, ensuring the site has the resources it needs.

Emergency Controller

They hold the ultimate authority for the entire plant, making the big decisions, including when to evacuate.

Module 6: Emergency Support and Coordination

6.1 Ambulance & Fire Tender (The Rescue Team)

Voice Over Script

The Ambulance and Fire Tender teams are our primary responders for physical threats.

Role

They provide immediate fire suppression and rescue operations.

Responsibility

Their goal is to control the spread of fire and safely evacuate anyone trapped or injured from the immediate danger zone.

6.2 Medical Support (The Care Team)

Voice Over Script

Medical Support focuses on the human element of the emergency.

Role

They act as the first line of clinical intervention, often working from the Occupational Health Centre (OHC) or arriving at the scene.

Responsibility

They provide life-saving first aid and determine if an injured person needs to be moved to an outside hospital for advanced care.

6.3 Electrical Coordinator (The Isolation Team)

Voice Over Script

The Electrical Coordinator handles the invisible hazards that can make a situation much worse.

Role

They manage the plant's power infrastructure during a crisis.

Responsibility

Their main task is the immediate power shutdown of the affected area.

This prevents secondary hazards such as electrical shocks, explosions, or machine restarts while rescuers are working.

Module 7: External Communication

7.1 Authorized Emergency Communication

Voice Over Script

While the ECR manages communication, decision-making authority lies with the Emergency Response Leaders.

The Incident Controller manages the situation directly at the scene.

The Incident Coordinator ensures resources and support are aligned across the plant.

And the Emergency Controller oversees the entire operation, making critical decisions that impact the whole facility.

Only these authorized leaders—along with designated personnel—are allowed to escalate communication beyond the plant when necessary.

This ensures that all information shared externally is accurate, verified, and consistent.

Shield Tip

“In an emergency, too many voices can create confusion. That’s why only trained leaders handle external communication.”

7.2 Statutory Bodies (Fire Brigade, Factory Inspector, PCB, etc.)

Voice Over Script

In certain situations, external authorities must be informed.

These may include:

- Fire Brigade
- Factory Inspector
- Pollution Control Board

However, this step is strictly controlled.

Only the Emergency Controller or authorized personnel will contact these statutory bodies based on the emergency communication flowchart.

This ensures:

- Accurate information is shared

- Legal and regulatory requirements are met
- Panic and misinformation are avoided

If you are approached by external agencies or the media, do not provide any information.

Instead, politely direct them to the authorized personnel.

Shield Reminder

“Right information, from the right person, at the right time—that’s how we maintain control during a crisis.”

Module 8: Emergency Communication Flow

8.1 Emergency Communication Process Flow

Voice Over Script

In an emergency, knowing who to contact and what to do next can save valuable time—and lives.

This Emergency Communication Flow is your roadmap for quick and effective response.

When an incident occurs, the first step is simple:

The First Observer identifies the emergency and raises the alert.

Immediately, two critical actions must happen:

- Inform your Line Manager or Supervisor
- Contact the Emergency Control Room (ECR)

You can reach the ECR using:

Internal Extensions

- 377
- 444

Landline

- 9046141555

Once the ECR is informed, the communication chain activates automatically.

The ECR coordinates with:

- Incident Controller – to manage the situation at the scene
- Incident Coordinator – to arrange resources and support
- Emergency Controller – to take overall decisions for the plant

At the same time, emergency support teams such as:

- Ambulance & Fire Tender
- Electrical Coordinator
- Medical Support (OHC / Hospitals)

are mobilized based on the situation.

If required, authorized personnel will also handle communication with:

- Fire Brigade
- Factory Inspector
- Pollution Control Board

8.2 Assembly Points (Important Action)

Voice Over Script

If evacuation is announced:

- Move quickly and safely to your designated Assembly Point

- Do not panic or run
- Wait for further instructions from the Emergency Response Team

Shield Reminder

“Do you know your nearest Assembly Point right now? If not, make it your mission to find it as soon as this training ends!”

Module 9: Summary & Conclusion

9.1 Key Takeaways

Voice Over Script

Let's recap the essentials:

Detect

Spot the hazard.

Report

Inform your supervisor and the ECR immediately.

Act

Follow the instructions of the Response Team.

Assemble

Move to your designated point during an evacuation.

9.2 Closing Slide

Voice Over Script

Thank you for being a part of the Tata Hitachi safety culture.

Remember, a prepared team is a protected team.

Stay safe out there!
